Telogis and Milsoft Utilities Solutions Successfully Interoperate Telogis Fleet with the DisSPatch[®] Outage Management System via MultiSpeak

Certification follows successful interoperability test with the DisSPatch[®] outage management system.

Aliso Viejo, CA, Sept. 1, 2010—[Telogis, Inc.](#), the platform for location intelligence, announces that its [Telogis Fleet](#) vehicle management solution has achieved [MultiSpeak[®]](#) Version 4 certification for interoperability with [Milsoft Utility Solutions' DisSPatch[®] Outage Management System](#) (OMS). MultiSpeak certification is a collaboration between the [National Rural Electric Cooperative Association](#) (NRECA) and leading software designers that supply the utility market to identify software products that work together without developing extensive or complicated interfaces.

By integrating Telogis Fleet with the DisSPatch OMS, utility customers will now visualize real-time location of field resources (both vehicles and assets) within Milsoft's DisSPatch Client Map. This allows dispatchers to better observe resource status and dispatch the closest technician with the most appropriate resources. It improves operational efficiency, outage management response time and overall productivity, saving both time and money.

"Integrating Telogis Fleet with a leading outage management system offers our utility customers additional levels of visibility and control over their mobile workforce, and increases the value of the location intelligence platform," says Jason Koch, president, Telogis Fleet. "MultiSpeak certification with Milsoft's DisSPatch solution improves workforce efficiency for utilities and better directs resources to where they are needed most."

"The integration with Telogis Fleet empowers our customers to make fast, accurate and critical decisions while in the field to ensure that power is restored as quickly and safely as possible," says Luis Malave, executive vice president and chief technology officer, Milsoft. "Milsoft is passionate about supporting MultiSpeak, as we feel that is the fastest and most cost-efficient way to deliver the value and usefulness of the software solutions that we deliver to our customers."

ABOUT TELOGIS

Telogis Inc., the platform for location intelligence, is dedicated to enhancing the value of its customers' businesses through intelligent integration of location technology, information and services. Telogis was established in 2001 and is headquartered in Aliso Viejo, Calif., with offices in Europe and Latin America as well as development centers in Austin, Texas and Christchurch, New Zealand. Telogis' products and services are used and distributed in more than 60 countries worldwide. To learn more about Telogis visit www.telogis.com or call toll free at 866-TELOGIS (866-835-6447).

ABOUT MILSOFT UTILITY SOLUTIONS

Milsoft has provided powerful software solutions for power system professionals in over 1,000 rural electric cooperatives, municipalities, educational institutions, and consultant offices in the United

States and abroad. Milsoft offers a suite of software solutions including Engineering Analysis, Outage Management, Integrated Voice Response, Geospatial Information Systems and Field Engineering to optimize utility performance and efficiency. Milsoft has developed an outstanding reputation for delivering quality products, services and support to the electric utility industry for over two decades and continues to thrive on product innovation and superior customer support.
