Huawei technology Co.,Ltd	MS	1.0	CD		CD	

Statement of Interoperable Functionality Between:

## Summary:

Web Service interfaces using MultiSpeak® 3.0 standards were developed in order to provide the following capabilities to utilities that have Huawei Advanced Metering Infrastructure (AMI) named as MS (Metering System) and EEOS (Electric Energy Operation System) Meter Data Management (MDM) named as:

- Enable MDM can command the AMI system to send a real time request to immediately disconnect or reconnect power at a meter for manual reconnection.
- Enable on-demand readings to be initiated from MDM system so that readings collected by AMI can be returned to MDM for use by utility personnel in customer service processes.
- Enable AMI can send real time events to MDM. Events include outage and restoration notifications.

# **Prerequisites**:

The Huawei AMI system must be deployed, including MS-enabled meters, communications

infrastructure and MS Head End System (HES) head end server. The MultiSpeak interface must be enabled and configured in MS. EEOS MDM system must be deployed. The MultiSpeak interface must be enabled and configured in MDM.

#### **Specific Vendor Assertions:**

### 1. MDM will request an on-demand meter reading from AMI.

**Importance to User**: Utility users can respond to customer questions and better provide answers by verifying a meter read on-demand during a conversation with the customer. This capability will also verify communications and power status at the meter to verify a reported outage. **How Achieved**: Utility user can initiate the request through the EEOS web user interface, at which time EEOS requests a read from the meter with an InitiateMeterReadByMeterNumber request to the HES. The HES pings the meter and returns the data to EEOS with a ReadingChangedNotification, for displaying to the user. Optionally, the action can be initiated by another application or automated workflow, with the results returned to the sponsor application.

# 2. MDM initiates a remote disconnection or reconnection of service, which is executed via the AMI system.

**Importance to User**: The utility can perform a service disconnect on a single meter or a list of meters remotely in situations such as move-out, termination of service or to suspend service for reason of non-payment. The utility can reconnect service remotely in situations such as move-in, or to restore service following receipt of payment from a customer previously disconnected for non-payment.

**How Achieved**: Utility user initiates the command in the EEOS web user interface, at which time EEOS requests the MS system to send a real time request for immediately disconnecting power immediately with an InitiateConnectDisconnect, reconnect power for manual reconnecting. After the meter responds, MS returns the new connect/disconnect state of the meter asynchronously with a CDStatesChangedNotification. If the meter doesn't communicate, the EEOS process will be time out.

# Product: CIS Summary of Interoperability Test Results (CB>CD) Table 1 Recommended MultiSpeak Methods (CD)

Method	CB>CD	Importance to User	Supported by Server1(CD)	Supported by Client2(CB)	Verified inter-operable3
InitiateConnectDisconnect	OPT	CB initiates a connect or	Х	X	x
		disconnect action by issuing one			
		or more			
		connectDisconnectEvent objects			
		to the CD			
GetMethods	REQ	Requester requests list of	X	X	x
		methods supported by CD			
PingURL	REQ	Requester pings URL of CD to	X	X	X
		see if it is alive			

1) Supported by Server means that the server has demonstrated in some interoperability test (not necessarily with this client) that it can support the method.

2) Supported by Client means that the client has demonstrated in some interoperability test (not necessarily with this server) that it can call the method.

### Table 3

## **Recommended MultiSpeak Methods (MR)**

Method	CB>MR	Importance to User	Supported by	Supported by Client2(CB)	Verified inter-operable3
			Server1(MR)		
GetLatestReadingByMeterNo	REC	Returns the most recent meter	X	X	Х
		reading data for a given			
		MeterNo.			
GetReadingsByMeterNo	REC	Returns meter reading data for	X	X	Х
		a given MeterNo and date			
		range.			
InitiateMeterReadByMeterNumber	OPT	CB requests a new meter	Х	Х	Х
		reading from MR, on meters			
		selected by meter number.			
GetMethods	REQ	Requester requests list of	X	X	Х
		methods supported by MR			
PingURL	REQ	Requester pings URL of MR	Х	Х	Х
		to see if it is alive			

1) Supported by Server means that the server has demonstrated in some interoperability test (not necessarily with this client) that it can support the method.

2) Supported by Client means that the client has demonstrated in some interoperability test (not necessarily with this server) that it can call the method.

# Product: CIS Summary of Interoperability Test Results (MR>CB)

# Table 4

## **Recommended MultiSpeak Methods (CB)**

Method	MR>CB	Importance to User	Supported by Server1(CB)	Supported by Client2(MR)	Verified inter-operable3
ReadingChangedNotification	OPT	MR Notifies CB of a change	Х	Х	Х
		in Meter Reads by sending			
		the changed meterRead			
		objects.			
GetMethods	REQ	Requester requests list of	Х	Х	Х
		methods supported by CB			
PingURL	REQ	Requester pings URL of CB	Х	Х	Х
		to see if it is alive			

1) Supported by Server means that the server has demonstrated in some interoperability test (not necessarily with this client) that it can support the method.

2) Supported by Client means that the client has demonstrated in some interoperability test (not necessarily with this server) that it can call the method.
